**Phishing Simulation Game Investigation  
ITCS 2500125a/2021  
Mokhamad Fikri Alfawaid**

“This is the end of the survey.

Just to remind you that the main aim of the experiment was to investigate the effectiveness of the phishing email simulation game in increasing the self-efficacy of the user. However, I was particularly looking to see how you made use of the game features, and whether you appeared confused at any time about the instruction or anything else in the game.

Do you have any comments or questions about the experiment? Please take a note of my email address and the email address of the module co-ordinator, and please let us know if you have any further questions about this experiment. Thank you for your help”

---

A note about remote collection of data: if there is a chance that participants may abandon an experiment before the end, so that there is no chance to debrief them, then this must be indicated in the introduction text.
